№4, 5

Всі записи, які прописані в коді рендеряться правильно

№9

Підсумок також оновлюється відповідно до записів.

№6 В коді є і додавання класу умовно, і додавання класу через card.classList.add, додавання умовно в моєму випадку є громістким і надмірним, простого форматування стрічки вистачає.
